

RESURFX CONSENT

PLEASE READ AND INITIAL EACH STATEMENT. COMPLETE, UNDERLINE OR CIRCLE INDIVIDUAL SELECTION ACCORDINGLY.

Lauthorize Doctor to perform fractional non-ablative laser resurfacing on my skin in an effort to improve. Pre and post-care instructions have been discussed and are completely clear to me. Lunderstand that there is a rare possibility of side effects or serious complications post-treatment, including pigmentary changes and scarring. Lam aware that careful adherence to all advised instructions will help reduce this possibility. Lunderstand the below list of short-term effects and skin responses and agree to follow matching guidelines: Discomfort – during the procedure, I might experience a hot needle pricking sensation, the degree of which will vary per my skin condition and area sensitivity. A mild "sunburn" sensation may typically follow for up to one hour and will be reduced with application of cooling and soothing creams. Reddening and swelling – severity and duration depend on the intensity of the treatment and the sensitivity of the area to be treated. These phenomena may be reduced with application of cooling and/or anti-inflammatory creams. Xerosis and pruritus – within the first few days after treatment, my skin may feel ltchy, tight and dry. Regular application of molistruzers helps reduce this sensation. "Bronzed" appearance – within the first few days after treatment, I may develop a pinkish and/or colored tone and discrete dry flaking. It is important I do not rub nor pick my skin, which may otherwise lead to scaring. A broad-spectrum (UVA/UVB) sunscreen SPF 30 or greater should be applied to the area(s) to be treated whenever exposed to the sun. Lunderstand that sun exposure or tanning of any sort is not aligned with the pre and/or post-care instructions and may increase the chance for complications. Lunderstand that results may vary with each individual and acknowledge that it is impossible to predict how I will respond to the treatment and how many sessions will be required for the expected level of improvement. Lonsent to photographs being taken for t			Initials
Iunderstand that there is a rare possibility of side effects or serious complications post-treatment, including pigmentary changes and scarring. I am aware that careful adherence to all advised instructions will help reduce this possibility. Iunderstand the below list of short-term effects and skin responses and agree to follow matching guidelines: Discomfort – during the procedure, I might experience a hot needle pricking sensation, the degree of which will vary per my skin condition and area sensitivity. A mild'sunburn'sensation may typically follow for up to one hour and will be reduced with application of cooling and soothing creams. Reddening and swelling – severity and duration depend on the intensity of the treatment and the sensitivity of the area to be treated. These phenomena may be reduced with application of cooling and/or anti-inflammatory creams. Xerosis and pruritus – within the first few days after treatment, my skin may feel lichy, tight and dry. Regular application of molisturizers helps reduce this sensation. "Bronzed" appearance – within the first few days after treatment, I may develop a pinkish and/or colored tone and discrete dry flaking. It is important I do not rub nor pick my skin, which may otherwise lead to scarring. A broad-spectrum (UVA/UVB) sunscreen SPF 30 or greater should be applied to the area(s) to be treated whenever exposed to the sun.
